

INVOICE VALIDATION & EXPORT CONTRACT RECONCILIATION

Ensuring you are billed accurately for the energy you use, supported by effective data capture for consistent reporting.

Quite simply no surprises in any aspect of your billing and confidence that you are paying the optimal amount for your business, however complex the energy procurement and demand management solutions you have in place.

In addition we will ensure that the full benefit of any generation is realised.

Who can access this service?

This service is for all Noveus Energy customers who have both an import and export electricity contract and want to ensure that the benefits of generation and cost avoidance are reflected in both import and export energy invoices

What you get

Our service is differentiated by our in house team's ability to undertake complex bill reconciliations required for customers on pass through energy contracts and short term demand side initiatives including STOR and transmission and distribution management. As a base level we ensure our customers benefit from the following:

- **Pay the right amount** - Errors corrected promptly, ideally before invoices are paid
- **Minimal disruption** - You don't have to deal with late payment and disconnection notices
- **Technical Insight** - We will help you make savings by integrating our understanding of your building with our technical billing insight - e.g. power factor and capacity.
- **Accurate Records** - We will store your data centrally and use it effectively for compliance (e.g CRC). You will have access to the data whenever you need it.
- **Financial Reporting** - We will provide monthly financial management reporting (this data also feeds into procurement performance reporting)
- **Data Share** - We will use validated data to support energy consumption reporting and reconciliations.

NOVEUS
ENERGY
OPTIMISING SUPPLY AND DEMAND THROUGH INNOVATION

For those customers that have both import and export contracts we provide an enhanced service which includes the following:

- **Half hourly data validation** – Ensuring that both sets of half hourly data accurately reflect any demand reduction and/or generation to enable full reconciliation.
- **Validation of generation costs** – Ensuring fuel supply costs are accurate and expenditure matches the forecast operational budget.
- **Accuracy** – Invoices are verified for accuracy giving you peace of mind that only correct invoices are being paid
- **Reconciliations** – We execute complex invoice reconciliations required in pass through energy contracts and short term demand initiatives to ensure the full benefit of demand reduction and generation is delivered to you through balancing import and export contracts.
- **Invoicing for generation** – We will calculate and produce invoices on your behalf for suppliers and The National Grid for energy export agreements.
